SBD-PTP

- Double sided automatic throughfeed machine with PTP-processing for sawing, boring and dowel driving

KOCH Model SBD-PTP Sawing - Boring - Dowel Driving

Double sided automatic throughfeed machine with PTP-processing

Machine Concept

This modern machine concept is the answer to the demands of todays market and future production requirements. The SBD-PTP combines perfectly the efficiency of the fast machines for high batch production with the flexibility of the CNC-processing.

- double sided complete processing in throughfeed: sawing boring glueing vertical dowel driving edge boring
- · minimal set-up times: quick reaction to customers' demands and by this always being competitive
- no fixed boring and dowel patterns: to construct as to the demands of customers and not to the machinery programme

Universal Range of Application

- drawers
- cabinet door and furniture components, profiled rails
- upholstered sofas and recliners, frame components, chairs
- front doors

Stock Dimensions

Machine Sequence

- KOCH Numeric with Pentium CPU calculator Windows NT system
 Touch Screen for all function inputs
- Telephone modem for remote trouble shooting
- NC-controlled movement of adjustable machine side
- Hopper feed with stock separation of work pieces
- Trim-saw station with hogger and horizontal stroke Rotation continuously adjustable 3000-6000 rpm
- Horizontal boring glueing dowel driving station NC positioning in throughfeed (Y) and in height (Z)
 boring spindle 7200 rpm
 glue valve + 1 dowel driving tool
 Electronic glue control ELC (patented)
- Vertical boring station

 1 overhead beam with hardened linear guides

 1 vertical support with NC positioning in X-Y-Z

 17 individually controlled vertical boring spindles

 (10 spindles in X, 7 spindles in Y)

 1 horizontal boring spindle for edge borings

 Rotation of drilling 9000 rpm
- Central lubrication for all NC-axes
- Stock return conveyor (1-man-operation)
- Protection fence and CE-package
